CAMPUS**

## **DATA STRUCTURE**

### **Lab Report**

Name: SAMI ULLAH  
Registration #: SEU-S17-030  
Lab Report #: 04  
Dated: 25-04-2018  
Submitted To: Mr. Usman Ahmed

The University of Lahore, Islamabad Campus  
Department of Computer Science & Information Technology

# Experiment # 1

## LINK LIST

### Objective

To understand and implement the LINK LIST .

### Software Tool

1.DEV c++

## 1 Theory

A linked list is a collection of components, called nodes. Every node (except the last node) contains the address of the next node. Thus, every node in a linked list has two components: one to store the relevant information (that is, data) and one to store the address, called the link, of the next node in the list. The address of the first node in the list is stored in a separate location, called the head or first

Linked list: A list of items, called nodes, in which the order of the nodes is determined by the address, called the link, stored in each node. The arrow in each node indicates that the address of the node to which it is pointing is stored in that node. The down arrow in the last node indicates that this link field is NULL.

## 2 Task

### 2.1 Procedure: Task 1

```
#include<iostream>
#include<stdio.h>
```

```

#include<stdlib.h>
using namespace std;
struct Node{
    int data;
    struct Node* next;

};
struct Node* head;
void Insert(int x)
{
    struct Node* temp=(Node*) malloc(sizeof(struct Node));
    temp->data=x;
    temp->next=head;
    head=temp;
}
void print()
{
    struct Node* temp=head;
    cout<<" List is ";
    while(temp!=NULL)
    {
        cout<<" "<<temp->data;
        temp=temp->next;
    }
    cout<<"\n";
}

int main()
{
    head = NULL;
    cout<<"how many numbers?";
    int n,i,x,y;
    cin>>n;
    for (i=0;i<n;i++)
    {
        cout<<"ENTER THE NUMBER"<<endl;
        cin>>x;
        Insert(x);
        print();
    }
}

```

```

C:\Users\SAMI\Documents\LINKLIST.exe
How many numbers?4
ENTER THE NUMBER
12
List is 12
ENTER THE NUMBER
23
List is 23 12
ENTER THE NUMBER
34
List is 34 23 12
ENTER THE NUMBER
45
List is 45 34 23 12
.....
Process exited after 5.788 seconds with return value 0
Press any key to continue . . .

```

Figure 1: Time Independent Feature Set

### 3 Conclusion

In this lab we learn about the application of link list and also how it works and get the idea about the link list and perform them practically on computer in c++
